

DG-T

Pressure Control Blower

Pressure control systems for foil cushion roofs

Roof areas up to 5,000 m²

Pressure range up to 3,000 pa

Galvanized Steel Plate

The blowers can be supplied in any RAL colour.

Reliable in use - worldwide.

Nolting pressure control systems combine drying of the ambient air and increase in pressure with redundant fans, adsorption dryers (T) and memory-programmable control (wind, snow, pressure sensors).

Various system sizes are available as base configuration - can be combined and modified for very large roof areas and cushion volumes. By integration of an additional system component all pressure control blowers can be used for shading as well (movable middle layer in cushion).

Can also be supplied in stainless steel.
